SKILLS

Programming: Java, Python, C, C++

Core: Object-Oriented Programming (OOP), Data Structures and Algorithms

PROJECTS

Smart AgroAssist – Automated Irrigation and Crop Prediction System

- Developed a smart agriculture system focused on **automated irrigation** and **crop prediction** for rural farming applications.
- Implemented the concept of using **soil moisture sensors** to detect dry soil conditions and automatically trigger irrigation, reducing water wastage and manual effort.
- Designed a crop prediction concept where farmers can enter the **crop name and month** to receive cultivation timing, water requirements, and nutrient information.
- Integrated hardware automation concepts with a software-based agricultural assistance platform.

EXPERIENCES

Student Project Experience

- Collaborated in a team-based engineering project involving **IoT concepts, sensors, automation, and software development**.
- Contributed to project research, problem identification, prototype development, documentation, and presentation.

ACHIEVEMENTS

- Successfully completed academic engineering projects involving **Java programming, data structures, and smart agriculture automation**.
- Participated in team-based academic activities including project presentations, prototype development, and technical discussions.

EDUCATION

B.E. in Computer Science and Engineering (Data Science)

2025–2029

Adichunchanagiri Institute of Technology, Chikmagalur, Karnataka, India

CGPA: 7.11
